Problem 1: For each of the following, give an exact answer when possible, else round to two decimal places.

- a. What percentage of 160 is 24?
- b. 15 % of which number is 450?
- c. What taxes does one pay on a \$200 purchase? Hint: B.C. has a 5 % and a 7 % PST.

Score: /3

Problem 2: Kristian purchased some Wild Life Conservation stocks for \$8500 and 30 months later sold the shares for \$12 200. Use simple interest to find the annual interest rate expressed as a percent on the earnings of his investment. Round to two decimal places.

Score: /3

Problem 3: David takes a \$6000 loan from the bank at 4.35 % annual interest rate, to be repaid in 3 years in equal monthly payments. Find his monthly payment and the total interest he pays on this loan. Round to two decimal places.

Score: /3

Problem 4: At the end of June, Sasha has a \$1300 balance on their credit card which imposes a 20.5 % annual interest rate. What will the finance charge be in the end of July ?

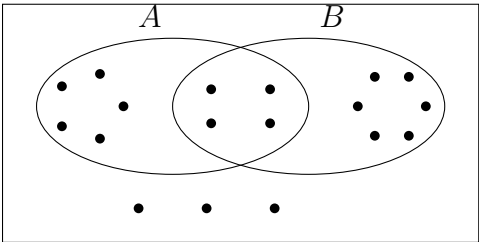

Score: /1

Problem 5: Janette’s grandmother has invested \$12 000 in a savings account that pays 3.5 % annual interest, compounded semi-annually (twice a year). How long would it take to triple (three times) her investment? Round to two decimal places.

Hint: $A = P \left(1 + \frac{r}{m}\right)^{mt}$.

Score: /3

Problem 6: Dad drew a big rectangle representing a sample space containing two events, A and B . Assuming that the outcomes (as dots) were all equally likely, answer the following questions with fractions simplified to lowest terms.

a. $P(\overline{A})$

b. $P(A \cap \overline{B})$

c. $P(B \mid A)$

d. Find the odds against event B .

Score: /4

Problem 7: Draw a spinner with four equal sectors labelled \$1, \$2, \$5, and \$10. Provide a sample space for spinning the spinner twice.

a. Find $P(X_1 + X_2 < \$5)$.

b. Find $P(X_1 \geq X_2)$.

Score: /3

Problem 8: Samlette invented a game of simultaneously flipping a fair coin and rolling a fair cubic die.

- a. Draw a probability tree for her game with every branch labelled with its corresponding probability.
- b. Highlight the branches which lead to the event that Samlette flipped Heads and rolled an even number.
- c. Find $P(H \cap \text{Even})$.

Score: /4

Problem 9: CapU’s Chancellor proposed that all students must take a course in Indigenous Studies as a requirement for graduation. Many among faculty members and students were asked about their opinion on this issue. Their choices are summarized in the following table with three blanks. Fill the blanks and answer the following.

	Favour	Oppose	Neutral	Total
Students	90	110		230
Faculty	45		10	70
Total		125	40	300

- a. Find the probability that a randomly selected person is a student AND neutral towards the taking of Indigenous Studies as a requirement.
- b. Given that the person is in favour of the requirement, find the probability that the person is a student.

Score: /2

Problem 10: Assume that 6 % of international visitors arriving at the Vancouver International Airport are sick with ARI (Acute respiratory infections). Suppose a test correctly identifies a visitor sick with ARI 95 % of the time. Also assume that the test falsely identifies a healthy visitor as sick with ARI 8 % of the time. If an international visitor tests negative, what is the probability in PERCENT that the visitor is sick with ARI? Round to 4 decimal places.

Draw a probability tree as part of your steps.
